A new “roadmap” indicating the direction of research in pavement management and pavement preservation is coming at just the right time, as states begin to openly curtail capacity improvements in favor of pavement preservation.

The Pavement Management Roadmap (FHWA-HIF-11-011) was articulated in 2011 by the Federal Highway Administration (FHWA) and helps identify the steps needed to address current gaps in pavement management – thus preservation – and to establish research and development initiatives and priorities.

Pavement preservation is a network-level, long-term strategy that enhances performance and extends pavement life by using a variety of cost-effective surface treatments, and its successful application is intertwined with effective pavement management.

For states fleeing to pavement preservation, the issue is money. As cash streams dwindle, state DOTs are compelled to use available funds to preserve their existing road network with a goal of improving their pavement condition indices (PCIs). Take these examples:

- **Missouri DOT** has put citizens on notice that it will spend money to preserve the existing system, and that the days of major capacity rebuilds – like the massive new I-64 total expressway rebuild in St. Louis, where reconstruction resulted in the complete closure of portions of the expressway in 2008 and 2009 – are over.

  In its five-year plan of June 2011, the Missouri Highways and Transportation Commission chose to reduce the size of DOT staff by 1,200, close 131 facilities and dispose of more than 740 pieces of equipment.

  “By 2015, the proposed direction will save $512 million for vital transportation improvements,” the plan’s executive summary states. “As of Sept. 30, we had eliminated 667 staff positions, closed 23 facilities and disposed of 245 pieces of equipment. Those moves have allowed us to save $177 million since March of 2010 when the initial plan was put into action. More than $64 million of that money has been used to improve the state’s rural roads.”

  In his November 2011 address to the Asphalt Emulsion Technologies Workshop sponsored by the Asphalt Emulsion Manufacturers Association, MoDOT chief engineer David Nichols, P.E., said given current cash flow, system preservation would take priority over capacity improvements, as one of three goals.

  “We are committed to keeping our roads and bridges in good condition for as long as we can with the resources we have, keeping our citizens safe, and delivering outstanding customer service,” Nichols said in St. Louis. He added that, in January 2012, MoDOT was going to seek legislative authority to create a public-private partnership with a goal of rebuilding I-70 from St. Charles to Kansas City as a toll highway, as tolls were the only way the project could be paid for given current funding levels.

- **Wyoming DOT** in November announced a strategy of preserving the state’s highways and bridges during the state’s current transportation funding crisis.

  “In anticipation of major funding decreases, WYDOT is making sweeping changes,” says director John Cox. “WYDOT has shifted its focus away from the kind of reconstruction and improvement projects we’ve been doing for the past four decades into more of a survival mode.”

  In a video released by the American Association of State Highway & Transportation Officials (AASHTO), Cox (Continued on page 4)
The National Indian Justice Center is located in Santa Rosa, California. NIJC’s building also houses the administrative offices of the California Indian Museum and Cultural Center, the Intertribal Court of California and the Regional Tribal Justice Center. Construction is currently underway for the California Indian Museum and Cultural Center, which will include a storytelling venue, Native plants garden, California Indian foods, a small Native village, audio-visual displays that highlight California Indian history and the contributions of California Indians, as well as Edward Curtis prints and traveling exhibits. If you are in the area, please come visit and tour the facilities.

Daniel George Moreno Jr., of Sitka, passed away on Feb. 9, 2012, due to medical complications, with his wife, family and friends at his side.

Dan was born to Daniel and Nancy (Fulton) Moreno on May 23, 1954, in Juneau. The family moved to Sitka in 1967 and made it their home. Dan graduated for Sitka High School in 1973 and received his bachelor’s degree in education from the University of Puget Sound. On Dec. 18, 1993, he married Sherry, his soul mate, the woman he would spend the rest of his life with.

Dan is survived by his loving wife of 18 years Sherry, Sitka; his mother, Nancy Moreno of Juneau; sisters Sharon and Janet, both of Juneau; brothers, Matthew of Juneau and Paul T. (Jamie) of Grants Pass, OR.

His sons are Robert of Seattle, Anthony of Sitka, Thomas (Alysha) of Colorado, Jeffery, Juneau; and his daughters are Rolanda (Kevin), of Klamath Falls, OR, Michelle of Pasco, WA, Cali of Pasco, and Danielle (Chuck) and Theresa, both of Sitka. Grandchildren are: Justin of Klamath Falls; Miranda of Pasco; Kyla and Keith both of Wasilla; Baby Danny and Nova Marie, both of Sitka; Amara Grace of Colorado; Baby E.J. of Sitka.

His great-grandchildren are Jaden and Spencer, both of Klamath Falls.

The passion shared with his wife and family was the heart of who Dan was. He also had a passion in life for his culture and the traditions. He made sure his family, friends and elders received fish, deer and herring eggs. He embraced the opportunity to share his knowledge of culture and traditions with the younger generations. Dan was an avid Kaagwaantaan dancer with both Sitka and Juneau during Celebration.

He cared deeply about improving and advancing transportation within the Alaska Native community through tribal governments. Over the past few decades he worked with the Sitka Tribe of Alaska, the Eastern Washington Tribal Technical Assistance Program, and the Bureau of Indian Affairs Indian Reservation Roads Program, was Chairman of the Board of Commissioners for Baranof Island Housing Authority and was consultant for Tribes in Alaska with their Indian Reservation Roads Program.

In 2006 Dan became self-employed as a Tribal transportation consultant. He offered Tribal transportation training and technical assistance, strategic planning and multi-agency coordination for Tribes throughout Alaska and the nation.

He was a shareholder of Shee Atika Inc., Sealaska Corp. and Sitka Tribe of Alaska; was enrolled as a Tribal Citizen; was a member of Alaska Native Brotherhood Sitka Camp # 1; Council of Tlingit & Haida Indian Tribes of Alaska enrolled Tribal Citizen; and Board member of the Alaska Tribal Transportation Work Group.

Contributions can be made to: Sherry Moreno, 101 Naomi Kanosh Lane, Sitka, Alaska 99835.
says changing the department’s focus to preservation will make the decline in the condition of the state’s highways more gradual. “Our primary goal is to preserve the existing highway system as long as possible,” Cox says. “What that does is it kind of staves off the inevitable, because sooner or later we’re going to have to take care of the system by getting underneath the pavement and reconstructing pavements.”

However, this approach will also result in fewer safety improvements to highways and a smaller number of projects designed to accommodate increasing traffic volumes, he says.

• **Ohio DOT’s** director said in October that his state was shifting to preservation. In today’s lean times, system preservation has become the priority for ensuring serviceable pavements, says director Jerry Wray, P.E., P.S., also in an AASHTO video: [http://www.transportationtv.org/Pages/default.aspx?VideoId=207](http://www.transportationtv.org/Pages/default.aspx?VideoId=207)

In the video, Wray explores Ohio’s strategy for preserving its highways and bridges during the current transportation funding crisis “There’s a limited amount of resources for an unlimited amount of wants, desires and needs,” Wray says. “We have to focus on the basics: What improves safety, the economy, and the quality of life for the people of Ohio.”

ODOT is working to be leaner, more efficient, and more effective. “We have a responsibility to all Ohioans to get the best value and highest rate-of-return for every dollar we spend,” Wray says. Like Missouri, that also will include public-private partnerships, which due to a change in Ohio law are now allowed.

New ‘Roadmap’ is a Guide

As more governments drift toward pavement preservation, they will become part of a national approach to pavement preservation which was bolstered in 2011 by the release of FHWA’s national Pavement Management Roadmap.

The roadmap is authored by Kathryn A. Zimmerman, Linda M. Pierce and James Krstulovich of Applied Pavement Technology, and helps identify the steps needed to address current gaps in pavement management, and to establish research and development initiatives and priorities.

While the roadmap nominally considers pavement management, the ability to preserve pavements economically via enhanced pavement management is a fundamental part of the roadmap.

“Unfortunately, decreases in the purchasing power of available funding, coupled with reduced funding levels, have led to deteriorating network conditions within most transportation agencies at the same time that demand for these facilities is increasing,” the introduction states. “As a result, many transportation agencies are shifting their priorities from a focus on system expansion to an increasing focus on system preservation. In fact, a number of agencies have recognized the cost-effectiveness associated with the use of preventive maintenance treatments to slow the rate of deterioration and to postpone the need for the most costly rehabilitation strategies.”

Pavement preservation is changing how road agencies work, the introduction says, and this is reflected in the examples of Missouri, Wyoming and Ohio above. “[T]he shift towards pavement preservation has not been entirely free from problems,” the introduction says. “For example, organizations that had previously separated the maintenance and capital improvement decision processes have had to overcome these institutional barriers in order to develop effective improvement programs that include preventive maintenance treatments.

“As a result of these and other changes impacting transportation agencies, the role of pavement management is changing,” the roadmap says. “In the past, pavement management was primarily considered to be used for assessing and reporting pavement conditions, prioritizing capital improvements, and estimating funding needs. Today, pavement management has the potential to fulfill a much broader (and more significant) role within a transportation agency.”

In addition to the more traditional roles it serves, pavement management can provide a link to maintenance and operations through the analysis of pavement preservation options. And it can provide the pavement performance data required to evaluate and calibrate the mechanistic-based performance models for use within a specific transportation agency.

**A Vision for 2020**

The roadmap attempts to clarify what the next 10 years will mean for agency pavement investments in its *Vision for Pavement Management in 2020*. 

“Pavement management will make use of a new generation of technology so agencies are less dependent on manual labor for data collection,” the vision statement says. “Pavement management tools will allow agencies to communicate effectively with stakeholders, using clear statements that are tied to agency goals and pavement worth.

“Within an asset management framework, pavement management will be used for investigating decisions and program
options in both private and public sectors,” the roadmap envisions. “A pavement management analysis will consider new materials and construction/design practices, as well as other factors that influence project and treatment selection, including safety, congestion and sustainability. As a result of these changes, pavement management will be robust, comprehensive and credible, and will address agency needs at the project, network and strategic levels.”

*Asset management* goes hand-in-hand with pavement management and pavement preservation. It provides a coordinated approach to managing infrastructure assets over the course of their entire life cycle, thus improving performance, increasing safety and providing greater value to the community.

With an asset management approach, optimal decisions on what would be the most effective mix of preserving, maintaining, renewing or replacing infrastructure components are based on accurate data, economic analysis and sound engineering.

Decisions are also supported by performance measures and performance-based goals. “The availability of quality data has had a tremendous impact on an agency’s ability to compare different investment options and to make sound business decisions that consider both engineering and economic factors,” says Nastaran Saadatmand of FHWA’s Office of Asset Management.

**Short/Long-Term Needs**

FHWA developed the roadmap through three regional workshops held in Phoenix, Dallas and McLean, VA, in 2010. Stakeholders participating in the workshops included representatives from state and local highway agencies, Canadian government agencies, academia and private industry.

Twenty-three short-term needs (the next five years) and 24 long-term needs (the next five to 10 years) were identified and prioritized by participants. Meeting these needs would require more than $14.5 million in funding. Needs were grouped by four theme areas:

- Use of Existing Tools and Technologies;
- Institutional and Organizational Issues;
- The Broad Role of Pavement Management; and
- New Tools, Methodologies and Technology.

Top short-term needs outlined in the roadmap include:

- communicating pavement management information and benefits,
- developing and using effective performance measures, improving the skills of pavement managers,
- developing automated condition data processing tools, and
- developing methods to quantify the benefits of pavement management.

The long-term needs include ones that will require research to improve existing practices. Priority long-term needs include:

- defining and calculating the effect of pavement preservation treatments on pavement life,
- defining the impact of pavement management investment levels on benefits,
- using pavement management data to support design activities,
- developing performance models that consider a series of pavement preservation treatments, and
- developing a method for effective modeling of structural condition.

The roadmap also looks at the steps required to make these identified priorities a reality, noting that “the successful implementation of the roadmap demands a focused, cooperative approach among national and international organizations,” the document says.

**Bridge Preservation Guide**

A new guide to bridge preservation also was released in 2011 and is available for download.

Published in May 2011, the new *Bridge Preservation Guide: Maintaining State of Good Repair Using Cost-Effective Investment Strategies* provides an overview of preventive and systemic preservation activities for bridge structures.

Bridge preservation is defined as actions or strategies that prevent, delay or reduce deterioration of bridges or bridge structures.

(Continued on page 6)
elements, restore the function of existing bridges, keep bridges in good condition and extend their life, according to the guide.

Like pavement preservation, effective bridge preservation actions are intended to delay the need for costly reconstruction or replacement actions by applying preservation strategies and actions on bridges while they are still in good or fair condition and before the onset of serious deterioration. Bridge preservation encompasses preventive maintenance and rehabilitation activities.

An effective bridge preservation program:

• employs long-term strategies and practices at the network level to preserve the condition of bridges to extend their useful life;
• has sustained and adequate resources and funding sources; and
• has adequate tools and processes to ensure that the appropriate cost-effective treatments are applied at the appropriate time.

High-Volume Road Preservation

In addition to the Bridge Preservation Guide, new guidance is now available for the preservation of high-volume roadways.

Even as road agencies have turned to pavement preservation to extend the life and improve the condition of their roadway networks, the use of many strategies has been restricted to lower-volume roadways, with little use on high-volume roads. To remedy this, a new report has been issued by the Second Strategic Highway Research Program (SHRP2), Guidelines for the Preservation of High-Traffic-Volume Roadways.

The guidance provides information to help expand agencies’ ability to use varied treatments to best meet the preservation needs on higher-volume roadways. As the guidelines note, “most preservation treatments will have the same beneficial effects on a pavement regardless of traffic volumes.”

Barriers historically inhibiting the greater use of preservation treatments on high-traffic-volume roadways have included increased performance expectations, increased risk of failure associated with the durability of treatments under higher traffic volumes, and lack of agency experience with certain treatments.

The guidelines include details on factors affecting project and treatment selections for pavement preservation, including traffic level, pavement condition, climate and environment, work zone duration restrictions, expected treatment performance and relative costs.

A sequential approach for evaluating possible preservation treatments for an existing pavement and identifying the preferred one is presented in the guidelines, diagramming how data sources and project constraints are considered.

Also presented is information on pavement distresses and how the various preservation treatments can address them. The treatments are described in initial feasibility matrices that outline possible applications for specific distresses and the treatments’ ability to prevent or slow pavement deterioration or to restore functionality or surface characteristics.

2012 National Conference on Pavement Preservation

A national conference on pavement preservation will be held in Nashville in August. FP2, Inc. – in collaboration with the National Center for Pavement Preservation – will sponsor the National Pavement Preservation Conference which will be held Aug. 27-30.

The national conference theme, Road Trip: Driving the Message for Change, promotes the idea that spending money to keep good roads in good condition is a cost-effective way to save America’s highways. Communicating the importance of preserving our highway investment will be an important conference objective.

The Renaissance Nashville Hotel is the venue for 2012, and is located in the heart of downtown near popular attractions. Building on the success of the First International Conference on Pavement Preservation in April 2010 in Newport Beach, Calif., this conference incorporates the first combined meetings of the Midwestern, Northeast, Rocky Mountain West and Southeast Pavement Preservation Partnerships, to examine advancements in current practice and new treatment technologies that offer improved reliability and enhanced performance.

For more information, visit www.nationalpavement2012.org or call (517) 432-8220.
Quantifying Environmental Sustainability in Pavement Preservation and Maintenance

Introduction

This chapter presents the seven environmental sustainability impact factor areas and the extent to which the survey responses used them in their construction and maintenance decisions. Environmental stewardship considers the use of renewable resources at below their rates of regeneration and nonrenewable resources below rates of development of substitutes as noted by the first two environmental sustainability impact factor areas. In addition, the need to provide a clean environment from both an air quality and water quality perspective could be included in an environmental monitoring plan, as well as including pollution prevention, climate protection, habitat preservation and aesthetics (Ramani et al. 2009).

Recycling, reusing, and reclaiming of existing materials is crucial to advance sustainable development (Carpenter and Gardner 2007). Construction materials can be expensive and now some resources are in limited supply, making it important to make good use of available materials. One of the concerns with the use of recycled material is potential uncertainty regarding the actual composition of a recycled material when compared with the virgin material it would replace. As a result, some agencies have withheld permission to use recycled materials, whereas others have limited the amount of recycled material that can be incorporated into the pavement structure (Melton and Morgan 1996; Smith and Romine 2009). Several successful uses of recycled asphalt pavement and recycled concrete aggregate are available in the literature and it can be noted that in addition to providing technical benefits, they improve the performance of the pavement (Beatty et al. 2002; Alkins et al. 2008; Tighe et al. 2008; Smith and Tighe 2009; Scholz 2010). Further, both hot and cold in-place recycling are used by agencies for maintenance and rehabilitation of pavements, minimizing the amount of new materials for the work and reducing energy requirements for transporting materials to the job site.

Table 4 shows that roughly 70% of the responding agencies permit the use of recycled materials in their pavement preservation and maintenance programs.

Alternative materials also hold the promise of being able to enhance environmental sustainability in pavement preservation and maintenance. Research has shown that materials such as recycled asphalt shingles, recycled rubber tire, recycled glass, and reclaimed carbon from copier toner can be successfully incorporated into new pavements (Chan and Tighe 2010). The incorporation of innovative materials can also potentially enhance pavement performance and reduce the demand for virgin materials (Horvath 2004). Thus, the survey sought to find the level of alternative material usage in agency pavement preservation and maintenance programs in Canada and the United States. Table 5 shows that alternative materials have a lower level of use than recycled materials, probably awaiting further research into their long-term performance in maintenance applications. Table 5 reflects the relatively widespread use of fly ash in concrete, as well as asphalt shingles and recycled rubber tires in hot-mix asphalt pavements. However, the use of other alternative materials remains relatively uncommon. These results suggest that future research into applications and performance of alternative materials could be of value.

Minimizing or eliminating noise pollution is another element of a sustainable design and construction program, and it follows that standards imposed on construction may also be applicable to main-

(Continued on page 8)
Table 6 shows the results of that portion of the survey. Only about 21% of the respondents believed that noise pollution is an important/very important issue in their agencies. Only 7% were aware of noise standards for their agencies’ pavement maintenance operations, whereas more than one-third of the survey respondents did not have any noise standards for maintenance operations. Relevant future research could help establish appropriate noise standards for construction and maintenance operations, and provide a tool for using noise considerations as part of treatment selection. As noted by the high number of respondents choosing the “no opinion” or “don’t know” categories, it could be suggested that education and training be provided in this environmental sustainability impact factor area for maintenance personnel.

For the environmental sustainability factor of water quality, there is a similar unfamiliarity among the survey respondents about how agency policies are applied to maintenance activities. Based on this evaluation, there are no current measures available that quantify the effects of pavement maintenance and preservation on water quality. The data indicate that the pavement preservation and maintenance treatment’s impact on water quality is considered less than half the time, probably because less than half the responding agencies indicated that they have agency water quality guidelines. That roughly one-third of all respondents did not know if their agency considered water quality or had water quality guidelines indicates that coupling programmatic environmental sustainability with pavement preservation and maintenance programs has not yet happened in North America. Again, this would reinforce the need to develop measures in this area for quantification.

The news with regard to air quality is better. A little over 60% of the agencies reported that they monitor air quality in the course of their pavement maintenance operations. However, only 25% of the agencies consider energy usage when selecting pavement preservation and maintenance treatments. Both of these are areas where the use of preventive maintenance treatments in a pavement preservation program can have a noticeable effect. Many of the treatments are emulsion-based, with comparatively low emissions. Similarly, providing quantitative measures for differences among energy use among the various treatments would be a valuable tool in treatment selection.

Summary

This chapter examines the current state of the practice related to the environmental sustainability impact factor areas and their application to pavement preservation programs and maintenance treatments. The recycled and alternative materials authorization is the most prevalent. Although it is not explicitly stated, the role of pavement in-service monitoring and pavement management is also common. If implemented properly, a sustainable pavement management program emerges, because the pavement monitoring system triggers pavement preservation activities, which in turn extend the service life of the pavement and reduce the impact to the environment in all categories. In short, keeping good roads good is the most effective way to sustain the service life of a road without consuming significant amounts of energy, virgin materials, and nonrenewable resources, which automatically reduces air, water, and noise pollution. A recent study of the Georgia DOT network-level pavement management system (Wang et al. 2010) demonstrated that such a system also makes economic sense. The report found that a robust in-service pavement monitoring system “will help decision makers address the question of paying for roadway preservation now at a lower cost or later at a much higher cost” (Wang et al. 2010). Further examination and quantification of this impact could be examined in future work as the direct policies and practices to pavement preservation and maintenance treatments could be explicitly reviewed for these environmental sustainability impact factor areas. In terms of noise pollution, water quality, and air quality there is clearly an opportunity to incorporate these environmental sustainability impact factor areas into preservation and maintenance operations.

The following conclusion was reached in this chapter:

- Although most agencies have environmental analysis incorporated into their design and construction operations, many maintenance practitioners are not familiar with how they could or should be applied to maintenance and preservation decisions.

National Study Underway to Develop a Guide for Effective Tribal Crash Reporting

Research has shown that a Native American’s risk of motor-vehicle related death is about four times that of the general population, (see Figure 1, Corbett & Mickelson, 2007). The loss of loved ones from motor-vehicle collisions has touched the lives of most residing in tribal communities. In many cases, these accidents are preventable. Collisions resulting from problems such as engineering (i.e. lack of signage or rumble strips), behavior (not using seat-belts or under the influence and driving), enforcement (inadequate policing of tribal roads) and emergency response (large land bases that tribal first responders must cover) contribute to the loss of tribal lives in motor-vehicle collisions.

In many states, tribal crash data is disproportionately underrepresented in statewide crash statistics. Tribal law enforcement reporting systems often lack the detail necessary to incorporate tribal crashes into state crash databases. Consequently, tribal transportation safety issues may go unnoticed by state and Federal programs that address transportation safety concerns. Additionally, many tribal communities do not have tribal law enforcement agencies that respond and collect data for crashes. Many tribes have limited access to data necessary to prepare applications for safety improvement funding.

Without accurate reporting of and access to tribal crash data, it is difficult to understand the problem and to develop appropriate countermeasures. It is therefore imperative to implement complete, accurate, and timely tribal crash reporting systems and to document how these systems can contribute to more effective tribal transportation safety programs.

This past year, the NCHRP Project 17-49 was initiated to produce a guide for the development and implementation of effective tribal crash reporting programs to improve tribal transportation safety. Study partners include researchers at the University of Wisconsin-Madison, College of Menominee Nation, and South Dakota State University, Chesnik Transportation Group, LLC and Indigenius Communications, LLC. Our partners bring significant research and field experience in crash data collection, reporting, analysis and tribal consultation. The final guide will include:

- Ways to improve communication and collaboration between state and tribal agencies
- Promising practices currently used by tribes
- Recommendations on how to implement crash reporting systems identified in this research

The data collection process will begin in early 2012 and will be accomplished through surveys and interviews conducted with tribal representatives from a sample set derived from all of the federally recognized tribes. However, the research team welcomes and encourages the participation by as many tribes as possible. Investigation of root causes of tribal transportation safety issues and identification of known success stories will also be conducted. Data summaries will focus on effective state-tribal communication and efforts that meet or exceed currently known success stories—these best practices will become the basis for the guide. The final goal is an effective document that helps states work with tribal agencies and helps tribes work with state agencies.

The research team is looking forward to working with tribes on this important project. We hope that if you receive the survey, that you or another designated representative from your tribal community will complete and return it to us. Your voice in this project is essential to its success!

To learn more about the project, please visit: http://apps.trb.org/cmsfeed/TRBNetProjectDisplay.asp?ProjectID=2973

For more information, please contact: Alyssa Macy, Indigenius Communications LLC, at alyssamacy@gmail.com or 414-748-0220.
The National Scenic Byways Program has witnessed an increased interest by Indian Tribes in developing scenic byway programs. This increase is fueled by recognition of the great opportunities that the byway program creates for communities on and around reservations. A number of tribes have clearly recognized this opportunity and are setting a grand vision for their byways’ futures.

The Yurok Tribe of California is a primary example. The Yurok Tribe has over 5,500 enrolled members and is the largest Indian Tribe in California. Its reservation is located in northern California and spans Humboldt and Del Norte Counties, starting at the confluence of the Klamath River and Bluff Creek and extending down-river to the mouth of the Klamath River at the village of Requa on the Pacific Ocean.

This past year, a National Scenic Byways Program Grant was awarded to the Yurok Tribe, making it the first tribe in California to begin developing a tribal scenic byways program. A clear vision has been set and numerous goals are awaiting implementation. This includes working with partners to assess and plan cooperative consideration for designations of roads on and leading to the ancestral territory of the Yurok reservation. One of the prospective roads is the Bald Hills Road corridor, which provides visitors with access to the world's tallest trees in the "Tall Trees Grove" in the Redwood National Park. In addition, Bald Hills Road leads visitors to the breathtaking open bald meadows that give the road its name. A portion of Bald Hills Road is located in the Redwood National and State Park lands and is a significant gathering place for plant materials used in basket-making, medicines, foods and ceremonies of the Yurok people. The tribe also plans to develop cultural interpretation programs for visitors throughout the Yurok Scenic Byways program.

Another goal that will benefit the byway visitor is the Tribe's plan to establish the Yurok Tribal Park System (YTPS). The YTPS will showcase both the Yurok Tribe's culture and native terrain while preserving these resources for present-day uses by the Yurok people. In addition, an integrated recreation trail is planned that will link the high mountains, stream and river valleys, and the coastal beaches.

The Tribe also has plans to acquire the 12.5-acre ancient Tsurai Village site in the Town of Trinidad. To accomplish this, the Tribe is partnering with the California Coastal Conservancy, City of Trinidad, the Tsurai Ancestral Society, and the Yurok Tribal Historic Preservation Office in drafting a management plan for the site. The plan will include developing a scenic trail, conducting ecological restoration, a possible village demonstration project and an active interpretive guide program.

The Yurok Scenic Byway Program and its vision aim to educate travelers who visit the ancestral territory of the Yurok Tribe. The development of the program will promote the unique local culture, rich history and diverse ecosystem supporting the region. "We want people to benefit from and appreciate driving across the Yurok Reservation. They have to know where they are to do that," said Yurok Chairman Thomas O'Rourke, Sr.

For more information about the Yurok Tribe's Scenic Byway program, please contact Javier Kinney, Yurok Transportation Manager, at jkinney@yuroktribe.nsn.us.

America’s Byways by Indian Tribes

In 2005, the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) amended the National Scenic Byways Program to allow the nomination of America's Byways® by Indian tribes, and to make Indian tribes, projects on Indian tribe scenic byways, and Indian tribe scenic byway programs eligible for funding. Because of this relatively new addition, discussion of Indian Tribes in this report is necessarily somewhat limited. As the number of Indian tribe scenic byways grows in the future, further research and evaluation may be necessary regarding potential Indian tribe issues related to assessing and sustaining the quality of the America's Byways® collection.

Through the Bureau of Indian Affairs (BIA), State tribal liaison offices, Tribal Historic Preservation Officers (THPO), and Tribal governments, the National Scenic Byways Program showcases the land and people stories of the American In-
The Pyramid Lake National Scenic Byway in Nevada, designated in 1996, is still the only nationally designated route entirely within tribal lands (the Pyramid Lake Paiute Indian Reservation) but at least eight other nationally designated byways (10 State byway segments) cross tribal lands, representing partnerships with 11 tribes:

- Jemez Mountain Trail, NM (Jemez)
- Native American Scenic Byway, ND/SD (Standing Rock, Lower Brule)
- Trail of the Ancients, CO/UT (Ute, Navajo)
- Coulee Corridor Scenic Byway, WA (Colville)
- Historic Route 66 NM (Laguna, Isleta)
- El Camino Real, NM (Isleta)
- Historic Route 66, AZ (Navajo, Hualapai)
- Northwest Passage, ID (Nez Perce)
- Pyramid Lake Scenic Byway, Nevada

The Future of the America's Byways Resource Center

Dear Byway Community:

As we welcome the New Year, we also begin our work of closing the Resource Center. Funds allocated to the America’s Byways Resource Center by Congress were withdrawn by the Secretary of Transportation.

Our first priority is to identify which of our products and tools can have a lasting legacy for the byway community. Our parent organization, the Arrowhead Regional Development Commission (ARDC), owns the rights to all the products, materials and publications. We will assess, in consultation with ARDC and FHWA, our products, services and publications for their long-term benefits and potential life beyond the Resource Center.

Our second priority is to provide as much advice, information and technical assistance as we can to byways before we close the doors. We have developed many valuable products for byway management and development such as Byways 101, Economic Impact Tool, National Scenic Byway Program Coordinator Guide, www.BywaysResourceCenter.org, and the Journal for America’s Byways, etc. We also provide excellent customized technical assistance. We will make every effort to ensure that byways have as much information and resources as we are able to provide until our office closes. Our current plans include closing the Resource Center to you, the byway community, on June 30, 2012.

We are grateful for your past support and appreciate your ideas and comments. During the next six months, we will use Vistas, our website, e-mails, and personal communications to share important news.

Michelle Johnson, Director, America’s Byway Resource Center

To view more information please visit: www.nijc.org
This information is provided expressly for educational purposes. The CA/NV TTAP hopes to inform and educate tribal communities about legislation that may impact California and Nevada tribal communities and their tribal transportation programs. The following legislation was current at the time of publication. Legislation may change or be repealed. For further information, please check the status of the legislation at the respective website sources noted below.

Due to the overwhelming number of pending transportation related bills in the California, Nevada, and Federal Legislatures we have created a downloadable file on the NIJC Website that lists each bill, the sponsor, the status, and a brief summary. To view and download the file go to: http://www.nijc.org/ttap_legislation.html

New Laws Report-2011
A list of all bills enacted in a calendar year during the Regular Session of the Legislature. The list identifies the bill and chapter number, lead author, and the subject of the measure. All bills on the list become effective on January 1 following the year of enactment, unless otherwise noted.

RECENT TRANSPORTATION LEGISLATION

16 Bills Pending
Bills Tribal Specific

Legislative Action to Watch

Senate Bill 803
Senator DeSaulnier), introduced 2/18/11.
Status: 1/26/12 in Assembly and read the first time.

California Youth Leadership Project.
Summary: Existing law establishes various programs to advocate for the needs of seniors and other groups, including the Senior Legislature. This bill would establish the California Youth Leadership Project under the State Department of Education for the purpose of supporting and promoting youth civic engagement by awarding scholarships to youth and civic engagement programs.
The bill would create the California Youth Leadership Project Committee, which would be chaired by the Superintendent of Public Instruction and be composed of specified appointed members.
The bill would authorize the advisory committee to enter into an interagency agreement with the State Department of Education to carry out necessary administrative functions. The advisory committee also would be charged with determining when there are sufficient funds to support the program, and if it determines that there are insufficient funds to cover all costs, the activities of the California Youth Leadership Project would cease.
This bill contains other related provisions and other existing laws.

May 20-26
National Public Works Week
The Office of Federal Lands Highway (FLH) provides program stewardship and transportation engineering services for planning, design, construction, and rehabilitation of the highways and bridges that provide access to and through federally owned lands.

The primary purpose of the FLHP is to provide financial resources and technical assistance for a coordinated program of public roads that service the transportation needs of Federal and Indian lands.

Federal Transit Administration
1200 New Jersey Avenue, SE
4th & 5th Floors East Building
Washington, DC 20590
http://www.fta.dot.gov/

Federal Transit Administration (FTA) is one of 10 modal administrations within the U.S. Department of Transportation. Headed by an Administrator who is appointed by the President of the United States, FTA administers federal funding to support a variety of locally planned, constructed, and operated public transportation systems throughout the U.S., including buses, subways, light rail, commuter rail, streetcars, monorail, passenger ferry boats, inclined railways, and people movers.

Rural Transit Assistance Program (RTAP)
The mission is to address the needs of rural, small urban and tribal transit operators across the nation.
Union Station Business Center
Ten G Street NE, Suite 710
Washington, DC 20002
Main: 202-248-5043
Fax: 202-289-6539

National Local Technical Assistance Program Association (NLTAPA) is a not-for-profit organization representing and serving the 58 LTAP and TTAP Member-Centers in the United States and Puerto Rico. All staff of Member-Centers are entitled to Association services and opportunities to serve. www.nltapa.org

Bureau Of Indian Affairs
There are millions of acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 561 federal recognized tribal governments in the United States. Developing forestlands, leasing assets on these lands, directing agricultural programs, protecting water and land rights, developing and maintaining infrastructure and economic development are all part of the agency's responsibility. In addition, the Bureau of Indian Affairs provides education services to approximately 48,000 Indian students.

FHWA - Tribal Transportation Planning
Delivers products and services that provide information, training, and technical assistance to the transportation professionals responsible for planning for the capital, operating, and maintenance needs on Tribal lands.
To visit the website go to:
http://www.tribalplanning.fhwa.dot.gov/

FHWA-Transportation Planning Capacity Building (TPCB) Tribal Planning Resources
Offers transportation planning professionals legislative, regulatory, and general guidance; technical resources; and relevant links related to Tribal planning issues.
To visit the website go to:
http://www.planning.dot.gov/tribal.asp

MORE TRANSPORTATION RESOURCES

U.S. DOT
ARRA Transportation Spending Map
American Recovery and Reinvestment and Act is sup-
porting 9,722 projects with $30.1 billion of investment.

FHWA-National Highway Specifications
For more information go to:
www.specs.fhwa.dot.gov

FHWA Resource Center Planning Team
The Planning Technical Service Team at the Federal Highway Administration (FHWA) Resource Center helps support the planning process through the provision of training, technical assistance, technology deployment, and partnerships.
For more information go to:
http://www.fhwa.dot.gov/resourcecenter/teams/planning/index.cfm

FHWA Federal-Aid Program Administration
The guide is intended to provide basic information for FHWA and State personnel involved in the administration of the Federal-Aid Highway Program. It is not intended to be an eligibility guide, but contains basic descriptions and historical information on active and inactive programs. This guide should be of interest to FHWA, State highway agencies, local governments, and private sector personnel interested in a basic understanding of Federal-Aid programs, projects, or other program characteristics. In addition to basic information, sources of additional information are provided.
For more information go to:
http://www.fhwa.dot.gov/resourcecenter/teams/planning/index.cfm

FHWA Soil Nail Analysis Program (SNAP) & Users Manual
FHWA-CFL/TD-10-004
A program for designing soil nail earth retaining structures, including both the nail and wall-facing elements of the structure.
To download the program go to:
http://www.cflhd.gov/programs/techDevelopment/geotech/SNAP/

FHWA-Federal Lands Highway (FLH)

FHWA
Office of Planning, Environment, & Realty (HEP)
Livable Communities
To visit the website go to:
http://www fhwa dot gov/livability/

Rural Technical Assistance Program (RTAP)
National RTAP proudly serves tribal communities residing in rural areas. Tribes are encouraged to access all of the National RTAP best practices, reports, training videos, workbooks, surveys and direct one-on-one technical assistance through our resource center.
To visit the center go to:
http://www.nationalrtap.org/Tribal.aspx

Victoria Transportation Policy Institute
Transportation Cost and Benefit Analysis
A guidebook for quantifying the full costs and benefits of different transportation modes. A comprehensive study of transportation benefit and costing research, and a guidebook for applying this information in planning and policy analysis.
To view the guide book go to:
http://www.vtpi.org/tca/

Partnership for Mobility Management
The Partnership for Mobility Management is a joint effort of technical assistance partners that work with local, state and regional leaders and organizations to realize the possibilities of improving transportation options for all Americans wherever they live and to assist those especially in need of alternative transportation options.
For more information visit the website at:
http://web1.ctaa.org/webmodules/webarticles/annviewer.asp?a=1790&z=95

Research and Innovative Technology Administration (RITA): University Transportation Centers
The Safe, Accountable, Flexible, Efficient Transportation Equity Act (SAFETEA-LU) enacted on August 10, 2005, authorized up to $76.7 million per year from Federal FY2005-2009 funds for grants to establish and operate up to 60 University Transportation Centers (UTCs) throughout the United States.
To view the website and list of UTC’s go to:
http://utc.dot.gov/about/index.html

Montana State University, Western Transportation Institute, (WTI)
The country’s largest National UTC focused on rural transportation issues. Because we live and work in rural communities, we understand the critical roles rural transportation plays in the lives of people, in the environment and in the economy.
To visit the website go to:
http://www.westerntransportationinstitute.org/default.aspx

ArcGIS Online—Map Services
ArcGIS Online base maps published and hosted by Esri are now freely available to all users regardless of commercial, noncommercial, internal, or external use. This means that you no longer have to pay a subscription fee for including ArcGIS Online base maps in your commercial-use web applications.
Base maps included in this new business model are World Imagery Map, World Street Map, World Topographic Map, USA Topographic Maps, and DeLorme World Base map.

One Call - One Click Transportation Services Toolkit
Community Transportation Association of America (CTTA)
Provides information for communities interested in working together-whether locally, regionally or statewide-to develop a one-call or one-click service for transportation.
To visit the website go to:

AASHTO Systems Operations & Management Guidance
An online tool that uses self-evaluation and best practice experience that managers can use to identify key program, process and institutional preconditions to achieve more effective SO&M.
To visit the website go to:
http://www.aashtosomguidance.org/

Small Urban and Rural Transit Center (SURTC)
The purpose is to increase the mobility of small urban and rural residents through improved public transportation.
To visit the site go to:
http://www.surtc.org/

TRANSPORTATION PROGRAMS AND DEVELOPMENT

FHWA Resource Center
The Mission to: advance transportation technologies and solutions through training, technical assistance, technology deployment, and partnerships.
For more information go to:
http://www.fhwa.dot.gov/resourcecenter/

The FHWA has developed an extensive list of resources that focus specifically on the latest culvert technology. To view this list go to:

National Highway Institute (NHI)
NHI Training In Action 2012-Magazine
Improving the Performance of Transportation Through Training.
To view the magazine go to:

National Highway Institute (NHI) - 2012
The NIH in partnership with the Transportation Curriculum Development Council has developed a number of FREE web-based trainings that can be completed in one, two, or three hours. Whether you are working in the field, have limited time for training, or just want to expand your skill set on a specific topic these web-based courses provide an ideal way to enhance your knowledge on key areas.
TCCC HMA Paving Field Inspection NHI Course 131129
TCCC Plan Reading Series NHI Course 134108
TCCC Flagger Training NHI Course 133118
TCCC Maintenance of Drainage Features for Safety NHI Course 380108
FOCUS on Training—Ready, Set, Go: Maintenance Training Series NHI Course 134109
TCCC PPE and High Visibility Garments NHI Course 381007
TCCC Special Mixture Design Considerations and Methods for Warm Mix Asphalt Course 131137

To view the entire list of available courses go to: http://www.nhi.fhwa.dot.gov/default.aspx

National Transportation Training Resource (NTTR)
The National Transportation Training Resource (NTTR) is an online database of information about learning resources for the public-sector transportation workforce. The NTTR is a tool for training managers and frontline transportation professionals. To visit the website go to: http://www.nttr.dot.gov/

FHWA Wildlife Vehicle Collision Reduction Study Training Course
A national study was conducted on the causes and impacts of wildlife vehicle collisions (WVCs). This study also provides recommendations and solutions for reducing these collisions. To view the course go to: www.environment.fhwa.dot.gov/WVCtraining/index.asp

National Cooperative Highway Research Program (NCHRP)
Report 667
Model Curriculum for Highway Safety Core Competencies presents course materials, including the instructor’s guide and student workbook, for a fundamental highway safety training course. The course is designed to address the core competencies highway safety practitioners should have or acquire. An accompanying CD-ROM includes a brochure and short Microsoft PowerPoint presentation for marketing the training course. To view the report go to: http://onlinepubs.trb.org/onlinepubs/nchrp/nchrp_rpt_667.pdf

Paul S. Sarbanes Transit in Parks Technical Assistance Center (TRIPTAC)
The TRIPTAC is available to all Federal Land Management Agencies (FLMAs), not only those applying for or receiving funds from the Transit in Parks program. State, local or tribal governments who are working in collaboration with an FLMA to expand public lands access are also welcome to use TRIP-TAC services to obtain alternative transportation information and assistance. To view available training courses go to: http://www.triptac.org/Training/TAC_Trainings/Default.html

University of California, Berkeley, Institute of Transportation Studies.
Technology Transfer Program
To visit the website go to: http://www.techtransfer.berkeley.edu/

Michigan Transportation Institute-Center for Technology and Training
Sign Retro Management Selection Tool helps you estimate how much it will cost your organization to implement different Federal Highway Administration sign retroreflectivity maintenance methods using your organization’s specific costs and implementation scenarios. To register for the tool go to: http://ctt.mtu.edu/ToolRegistration.html

U.S. Small Business Administration (SBA)
Online Courses for Starting Your Business
Several free online courses are offered by the SBA to help prospective and existing entrepreneurs understand the basics about writing a business plan. For more information go to: http://www.sba.gov/content/online-courses-starting-your-business

Community Transportation Association of America (CTAA)
Passenger Service and Safety PASS Basic Training Program
The PASS Basic program consists of 6 modules and includes comprehensive training on the assistance that drivers should be providing to passengers with special need. For more information go to: http://training.ctaa.org/

PUBLICATIONS

The following are the most recent publications received and entered into the National Indian Justice Center (NIJC) data base. The NIJC web site has the complete list of publications going back several years. One Design—10,000 Bridges
Thousands of bridges across America must be replaced. A new tool kit for designing and constructing bridges brings home the benefits of accelerated bridge construction techniques so local contractors can use typical equipment to build bridges quickly and efficiently. Developed through the second Strategic Highway Research Program, a division of the Transportation Research Board, the tool kit was demonstrated in construction of a bridge over the Keg Creek near Council Bluffs, Iowa.
To View the video go to:
http://www.trb.org/StrategicHighwayResearchProgram2SHRP2/Pages/Video-One_Design-10,000_Bridges_536.aspx

Ordering Information
Printed copies of our in-house publications are available on a first-come, first served basis. Priority is given to Tribal Transportation Personnel. PDF versions of most of our publications are available on our website: http://www.nijc.org/ttpap_resources.html

All our videos, publications and CD-ROMs in our lending library are loaned for a four-week period. Two titles may be borrowed at a time.

To order or borrow materials, please send a request to: barry@nijc.org or, nijc@aol.com or Fax a request to:707-579-9019.

To view past issues of publications, videos and development programs, please visit our website library at: http://nijc.org/datasheets/ttpap/TTAP_Resourceslist.asp
Governor Brown Appoints Tribal Advisor

Cynthia Gomez, 54, of Sacramento, has been appointed Governor's Tribal Advisor and executive secretary for the Native American Heritage Commission. Gomez has been the chief justice for the Shingle Springs Band of Miwok Indians Tribal Court since 2010. She was assistant secretary of environmental justice and tribal governmental policy for the California Environmental Protection Agency from 2008 to 2010, chief of the Native American Liaison Branch for the California Department of Transportation from 1999 to 2008, and a housing and community development representative for the California Department of Housing and Community Development from 1989 to 1999. Gomez is a member of the Tribal and State Court Forum for the California Administrative Office of the Courts and has served as chair of the Transportation Research Board’s Native American Transportation Issues Committee. Gomez received a Juris Doctorate degree from the University of Northern California, Lorenzo Patiño School of Law. These positions do not require Senate confirmation and the total compensation is $140,000. Gomez is a Democrat.

Governor Brown established this position by Executive Order to bolster communication and collaboration between California state government and Native American Tribes. The Tribal Advisor will serve as a direct link between the Governor’s Office and tribal governments on matters including legislation, policy and regulation.

Top BIA Official Larry Echo Hawk Resigns to Take LDS Church Post

SALT LAKE CITY — The top official for the U.S. Bureau of Indian Affairs is resigning to accept a full-time leadership position with The Church of Jesus Christ of Latter-day Saints, ending three years with the department that Interior Secretary Ken Salazar says "opened a new chapter" in U.S. relationships with American Indian tribes.

Larry Echo Hawk, the assistant secretary of the Interior for Indian Affairs, is being appointed to the Quorum of the Seventy, the Mormon Church's third-highest governing body. The announcement from the church came Saturday during its semi-annual general conference in Salt Lake City.

President Barack Obama appointed Echo Hawk, 63, to oversee the BIA in 2009.

"With Larry Echo Hawk's leadership, we have opened a new chapter in our nation to nation relationships with American Indian and Alaska Native tribal governments, accelerated the restoration of tribal homeland, improved safety in tribal communities, resolved century-old water disputes, invested in education, and reached many more milestones that are helping Indian nations pursue the future of their choosing," Salazar said in a statement.

During Echo Hawk's tenure, the Interior Department settled a $3.4 billion class-action lawsuit with Native American landowners over mismanaged royalties. The settlement reached in late 2009 is under appeal.

Salazar said he would work with Echo Hawk to ensure a smooth transition within the BIA. It was not clear who would be appointed to oversee the BIA after Echo Hawk's departure.

Echo Hawk, a member of the Pawnee Nation, was elected Idaho attorney general in 1990, the first Native American to be elected to the position in any state. He ran unsuccessfully in 1994 for Idaho governor as a Democrat.

He was a Brigham Young University law professor for 14 years before leading the BIA.

After his appointment, Echo Hawk said in a speech in Salt Lake City in 2009 that he wrestled with the decision to accept a position that would make him a "face" for a federal government that has had a sordid history of mistreating Indians. He finally reconciled his hesitation by vowing to be an "agent for change" instead of a mere caretaker.

"How do you reverse 200 years of struggles?" he said then. "It's not going to be easy."
CALIFORNIA

NOTE: many of the listed transportation programs are dependant on the extension of SAFETEA-LU or the passage of the Re-authorization Transit Bill.

CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS)

The State-Legislated Safe Routes to School Program
California Safe Routes to School program is contained in the Streets & Highway Code Section 2330-2334. For more information on this program go to: http://www.dot.ca.gov/hq/LocalPrograms/saferoutes/saferoutes.htm

Memorandum of Understanding (MOU)
The California Department of Transportation (Caltrans), in consultation with the Governor’s Office of Small Business Advocate, have entered into a Memorandum of Understanding (MOU) with the U.S. Small Business Administration (SBA), to offer a technical assistance surety bond guarantee program to promote increased small business participation in this initiative provides a viable means to advance the unimpeded participation of all willing, ready, and able construction contractors and subcontractors, professional architectural and engineering firms, suppliers and truckers, without regard to race, ethnicity, gender, or physical disability to participate in the State’s Contracting Program.
For more information contact a Small Business Development Center in your area, or call Linda Madden 919-324-8384; e-mail Linda_Madden@dot.ca.gov

California Department of Resources Recycling and Recovery (CalRecycle)
CalRecycle offers a variety of grant funding opportunities to assist public and private entities in safely and effectively managing California’s waste stream.

- Beverage Container Recycling Grants
- Farm and Ranch Cleanup Grants
- Household Hazardous Waste (HHW) Grants
- Local Enforcement Agency Grants
- Solid Waste Disposal and Site Cleanup Grants
- Tire Recycling, Cleanup, and Enforcement Grants

- Used Oil Recycling Grants
Additional grant information and list of active grants can be found at: http://www.calrecycle.ca.gov/Grants/

NEVADA

Nevada Department of Transportation (NDOT)

Safe Routes to School Program
For more information regarding the Nevada Safe Routes to School, please visit: http://www.walknevada.com/

Nevada Transportation Enhancement Program
The Nevada Department of Transportation (NDOT) and the Federal Highway Administration (FHWA) share your interest in these projects and others that enhance the transportation experience in your area and make our communities more livable. The TE program was developed to fund projects that go beyond where typical transportation projects usually stop.
For more information go to: www.nevadadot.com/About_NDOT/NDOT_Divisions/Planning/Enhancement_Program.aspx

Transportation Systems Projects
Project Submittal Program
A Transportation Improvement Project can increase roadway capacity (additional lanes); increase the safety of the roadway (right/left turn lanes, passing lanes, pull outs); enhance an intersection (signals, stop signs, lighting); upgrade the roadway (realignment, reconstruction, overlay, drainage); or any other project that improves the roadway. Projects such as welcome and gateway community signs are eligible projects. Repair and reconstruction of bridges are also included. Primary reasons for a project can be safety issues, congestion relief, bridge repair/replacement, new development (both residential and commercial) or maintenance of the roadway. Applications can be for projects located on or near federal/state highway or non-federal/state highway that has been given a functional clarification. Federal and State Agencies, Tribal governments, county, city and local governments, local public agencies or private non profits can apply.
Dates: Completed applications are due the first Monday in January (Tuesday if Monday is a holiday). Applications received after January will be held until the next Evaluation cycle in January the following year.
For information contact: Project Program Development Coordinator (775) 888-7122, or e-mail projectsubmittal@dot.state.nv.us.

FEDERAL

U.S. DEPARTMENT OF TRANSPORTATION

Federal Safe Routes to School Program (SRTS)
The Federal Safe Routes to School program (SRTS) was authorized by SAFETA-LU (the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users). This federal program has different eligibility and local match requirements than the state-legislated program. For more information on this program go to: http://www.dot.ca.gov/hq/LocalPrograms/saferoutes/srts.htm

Federal Transit Administration

Public Transportation On Indian Reservations (FTA 5311)
Federally recognize tribes may use the funding for capital, operating, planning, and administrative expenses for public transit projects that meet the growing needs of rural tribal communities. Examples of eligible activities include: capital projects; operating costs of equipment and facilities for use in public transportation; and the acquisition of public transportation services, including service agreements with private providers of public transportation services.

FHWA

Surface Transportation Environment and Planning Cooperative Research Program
The STEP is the primary source of funds for FHWA to conduct research and develop tools and technologies to advance the state of the practice regarding national surface transportation and environmental decision-making. In FY 2010, FHWA sought partnerships that leveraged limited research funding in STEP with other stakeholders and partners in order to increase the total amount of resources available to meet the nation’s surface transportation research needs. The proposed FY2011 STEP funding levels are subject to the completion of the FY2011 Department of Transportation (DOT) appropriations process. The anticipated FY2011 STEP research efforts are preliminary and subject to change. In FY 2010, STEP addressed national re search priorities that included:
(1) Conducting research to develop climate change mitigation and adaptation strategies;
(2) Improving state of the practice regarding livability and the impact of transportation on the environment;
(3) Developing and/or supporting accurate models and tools for evaluating transportation measures and developing indicators of economic, social, and environmental performance of transportation systems;
(4) Developing and deploying research to address congestion reduction efforts;
(5) Developing transportation safety planning strategies for surface transportation systems and improvements;
(6) Improving planning, operation, and management of surface transportation systems and rights of way;
(7) Enhancing knowledge of strategies to improve transportation in rural areas and small communities;
(8) Strengthening and advancing State/local and tribal capabilities regarding surface transportation and the environment;
(9) Improving transportation decision-making and coordination across borders;
(10) Conducting research to promote environmental streamlining/stewardship;
(11) Disseminating research results and advances in state of the practice through peer exchanges, workshops, conferences, etc;
(12) Meeting additional priorities as determined by the Secretary; and
(13) Refining the scope and research emphases through active outreach and in consultation with stakeholders. The number of stakeholders with an interest in environment and planning research is enormous and diverse, includes three tiers:

Tier 1 - Federal Agencies and Tribes: There are at least a score of Federal agencies with strong interest in transportation planning and environmental programs including: the Departments of Commerce, Defense, Homeland Security, Agriculture, Energy, Interior (DOI) and Housing and Urban Development, the Environmental Protection Agency (EPA), and the Centers for Disease Control and Prevention (CDC).
Within each of these agencies, there are many discrete organizations/programs with an interest - e.g., National Park Service, U.S. Fish and Wildlife Service and Bureau of Land Management within the DOI. Within the US Department of Transportation (USDOT), FHWA partners with the Federal Transit Administration (FTA) on virtually all planning and environmental work, including research. The FHWA also coordinates with the Federal...
TRIBAL TRANSPORTATION FUNDING RESOURCES

FUNDING RESOURCES (Continued)

Railroad, Aviation, Research and Innovative Technology, National Highway Traffic Safety and Maritime Administrations, and with the Office of the Secretary of Transportation on Global Climate Change as well as other issues. There are over 500 federally recognized Native American Tribes, which have a major interest in research affecting their planning and environmental needs.

For more information go to: http://www.fhwa.dot.gov/HEP/STEP/index.htm

Dwight David Eisenhower Transportation Fellowship Program (DDETFP)
Eisenhower Tribal Colleges and Universities Fellowship Provides Students in those schools with opportunities to pursue careers in Transportation. This fellowship also serves a feeder for other Eisenhower Fellowships. Currently funded at $2.2M annually.

For more information go to http://www.fhwa.dot.gov/tpp/ugp.htm

National Scenic Byways Program
Under the program, the U.S. Secretary of Transportation recognizes certain roads as National Scenic Byways or All-American Roads based on their archaeological, cultural, historic, natural, recreational, and scenic qualities. The program allows Indian Tribes to submit applications directly to FHWA division offices, and authorizes FHWA to enter into project or grant agreements directly with Indian Tribes.

For more information go to: http://www.bywaysonline.org/

Bureau of Indian Affairs (BIA)
Traffic Safety on Indian Reservations
The Secretary of Transportation, Bureau of Indian Affairs ("BIA"), has announced that funds will be available to federally recognized Indian tribes on an annual basis for implementing traffic safety projects designed to reduce the number of traffic crashes, death, injuries, and property damage within Indian Country.

Applications due May 1 of each program year.

U.S. Department of Agriculture
USDA Rural Development Grants
The mission is to increase economic opportunity and improve the quality of life for rural residents. Rural Development fosters growth in homeownership, finances business development, and supports the creation of critical community and technology infrastructure. Further information on rural programs is available at a local USDA Rural Development web site: http://www.rurdev.usda.gov/rbs/busp/bprogs.htm

FEMA: Hazard Mitigation Grant Program
Hazard mitigation is any sustained action taken to reduce or eliminate long-term risk to people and property from natural hazards and their effects. This definition distinguishes actions that have a long-term impact from those that are more closely associated with immediate preparedness, response, and recovery activities. Hazard mitigation is the only phase of emergency management specifically dedicated to breaking the cycle of damage, reconstruction, and repeated damage. As such, States, Territories, Indian Tribal governments, and communities are encouraged to take advantage of funding provided by HMA programs in both the pre- and post-disaster timeframes. Together, these programs provide significant opportunities to reduce or eliminate potential losses to State, Tribal, and local assets through hazard mitigation planning and project grant funding. Each HMA program was authorized by separate legislative action, and as such, each program differs slightly in scope and intent.

The Hazard Mitigation Grant Program (HMGP) may provide funds to States, Territories, Indian Tribal governments, local governments, and eligible private non-profits following a Presidential major disaster declaration. The Pre-Disaster Mitigation (PDM), Flood Mitigation Assistance (FMA), Repetitive Flood Claims (RFC), and Severe Repetitive Loss Pilot (SRL) programs may provide funds annually to States, Territories, Indian Tribal governments, and local governments.

For more information go to: http://www.fema.gov/government/grant/hmgp/index.shtm

Department of Commerce, Economic Development Administration
Economic Development Assistance Programs AND Planning and Local Technical Assistance Programs
EDA’s mission is to lead the Federal economic development agenda by promoting innovation and competitiveness, preparing American regions for growth and success in the worldwide economy. In implementing this mission pursuant to the Public Works and Economic Development Act of 1965, as amended (42 U.S.C. § 3121 et seq.) (PWEDA), EDA advances economic growth by assisting communities and regions experiencing chronic high unemployment and low per capita income to create an environment that fosters innovation, promotes entrepreneurship, and attracts increased private capital investment.

Applications are accepted on a continuing basis and processed
as received.
For FY 2012: Cycles 2 - Dec 15, Cycle 3 -Mar 9, Cycle 4 - Jun 8, and For FY 2013: Cycle 1-Sep 14

Department of Interior (DOI)
Funding availability is restricted to state governments and Federally recognized Indian Tribes. The Office of Surface Mining awards grants to States and Tribes to support the operation of APPROVED State and Tribal abandoned mine land (AML) reclamation programs. Approved programs use grant funds for mine site reclamation projects on eligible lands, which are lands and waters mined or affected by coal mining processes that occurred prior to August 7, 1977 as well as certain post-1977 and non-coal mining activity.
Deadline September 30, 2012, applications are due throughout the Fiscal Year (FY)

The Kodak American Green Ways Program
Eastman Kodak Company, The Conservation Fund
and the National Geographic Society team up each year to present the Kodak American Greenways Awards Program. One major element of the Program involves “seed” grant awards to organizations that are growing our nation's network of greenways, blueways, trails and natural areas.
The Program operated by The Conservation Fund invites land trusts, local governments, and other organizations to submit proposals for small greenway project grants. Funded projects typically advance one or more of the following Program goals:
- Catalyzing new greenway projects
- Assisting grassroots greenway organizations
- Leveraging additional money for conservation and greenway development
- Promoting use and enjoyment of greenways
